STAGE 1

Raw data
Valmiki Ramayanam in Ancient English and Sanskrit
converting ramayan verses into formal and more LLM interpretable English (i.e removing toxicity and perspective anamolies). Ex: 16 verses = one 1024 token size formal english chunk
Chunks
1024 token sized chunks of modified Ramayan
Defining Knowledge Graph Schema, i.e the types of nodes and edges that should be present. Ex: node types: charecters, Events...edge types: wife_of, fought_in
Triplets
generating 20-30 triplets (by llm) for each chunk based on the schema
output: **triplets** which are in the form **(node, edge, node)**
